

Intelli Heat

Intelligent & Stylish

Electric Central Heating

No Plumbing, Pipes or Maintenance

Complete control at your fingertips with the warmth & comfort of friendly energy efficient central heating

-  Real Time Room Temperature
-  Measure Actual Energy Usage
-  Monitor & Reduce Costs

NEEDO MONOLITHE

This totally new
stunning design
combines
heating lighting
and mobility

CALI & CALIDUS

Stylish simplicity
aluminium
58cm high
9.5cm deep
5 outputs
600 - 2000w

NEEDO Line M
Slimline, only 3cm deep
aluminium 65cm high
5 outputs 750 - 1800w
CHOICE of 9 colours

ANGLIA

Classically
elegant. Steel
40/60cm high
7.5cm deep
7 outputs
500 - 2000w
Low/high
surface
temperatures
43c and 71c

NEEDO Line T
only 3cm deep
aluminium 65cm high
5 outputs 750 - 1800w

ALTO

aluminium
185cm high
7.5cm deep
3 outputs
1200 - 2000w

ANTICO

Steel
60cm high
19.5cm deep
3 outputs
1200w
1500w
2000w

NEEDO

Chrome towel
rails, black
or red finish
500 - 1250w

BALNEUM

Towel rails
87.5cm and
129.5cm high
600 & 900w

Unrivalled choice of programming and control

The Classic Range

Each radiator is equipped with a built-in intelligent lockable thermostat combined with a 7 day digital LCD programmer, can either be programmed individually or used as part of a centrally controlled system using our wireless IntellyGreen or hard-wired Pilot Wire control & programming systems.

The latest Pilot Wire Programmer

This classic hard-wired 2 or 4 zone system with a fixed wall mounted digital controller provides excellent programming and control options.

NEW The ZoneRay - Multi-Zone Programmer

An intelligent multi-functional hand-held or wall mounted digital programmer providing complete wireless control of up to 6 zones. The advanced wireless generation of the popular pilot wire system.

Circeo Wireless

Cute and user friendly, controls and enables daily and weekly programming with the ability to set hour by hour sequences.

The Wippy

Intellygreen

Supplied with IntelliGreen packages, PC & Internet access options available

NEW

MyNEEDO

This cool looking wireless control centre with touch screen controls represents the ultimate in style. Communicating with each of your **NEEDO** radiators it enables you to programme and monitor the warmth of each room, optimise comfort levels, and to manage energy use to ensure real savings.

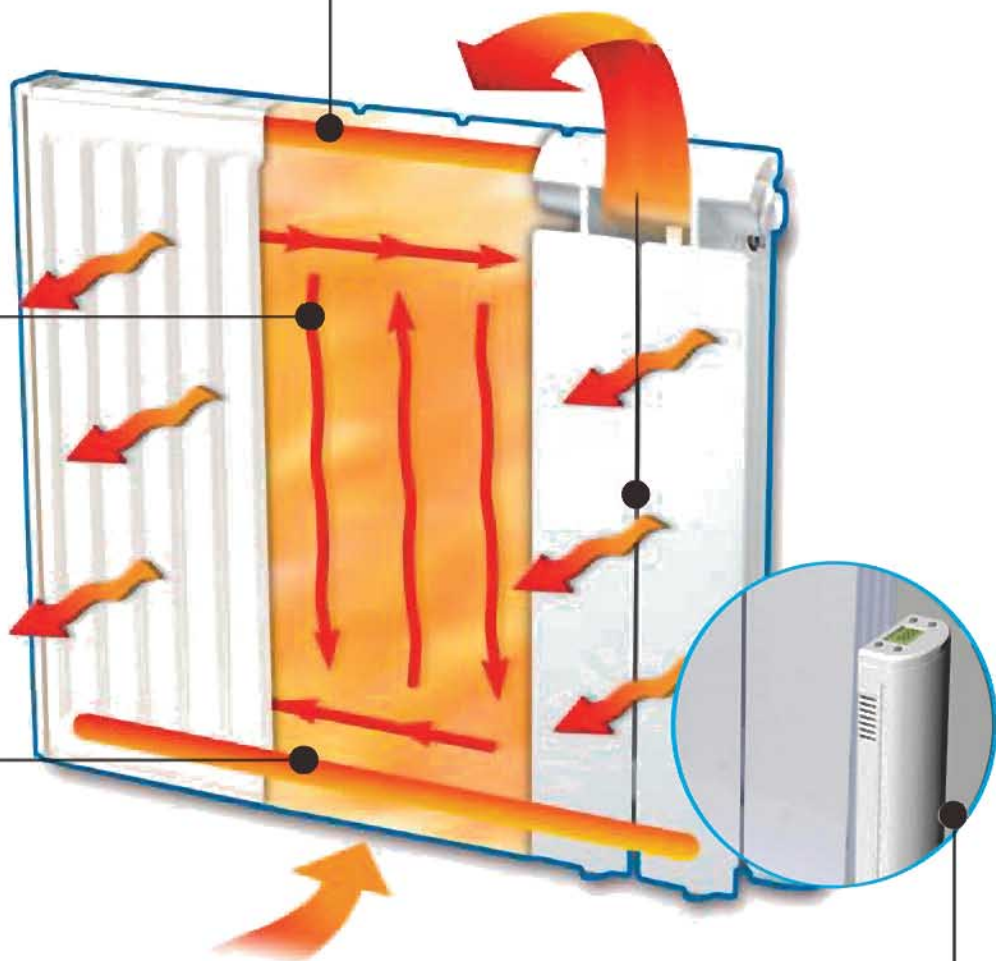

The Wippy is the first and only wireless system to have interactive thermoregulation and programming ability, it can pass on programs and instructions to and receive information from up to 50 radiators simultaneously. Crucially it provides real-time electricity use and running cost data for each radiator, and uniquely for any electrical appliance, enabling total energy management to ensure maximum savings.

How it Works...

Heating body
made in aluminium
or steel, both metals
favour circulation as
well as optimum
heat retention

**High capacity
thermodynamic fluid,**
especially designed for
Intelli Heat in order to
perfectly meet all the
technological obligations
and comfort requests.

Heating resistance
The element on the bottom
of the radiator is double
insulated allowing
the unit to be installed
on a ring without earth.

Electronic regulation
Allows the management of
temperature with an accuracy
to 1/10th of a degree controlling
the flow of electricity,
despite variation of external
temperature.

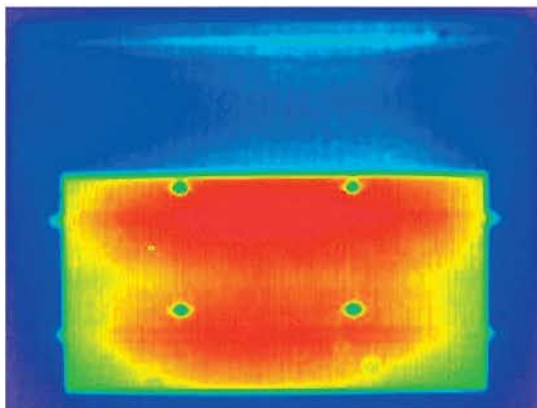

*...At last electric heating
you can afford to run...*

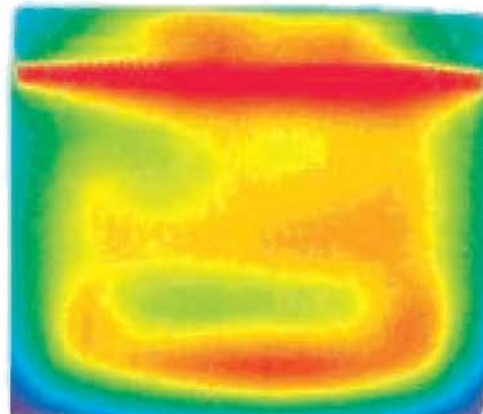

The Power Behind Heat Control

By simply using the same wiring, it's also easy to replace existing old bulky electric storage heaters with Intelli Heat radiators, which are considerably cheaper to run and far more controllable. Intelli Heat's perfect heat management system is created by using heat retaining steel or aluminium, thermo-fluid filled radiators in a stylish range of contemporary and traditional designs. Electric controls automatically calculate the required electricity flow, with all the electricity used converted directly into heat. Each radiator is effectively a central heating unit with it's own electronic lockable thermostat, providing heat with unique flexibility and controllability. The system becomes even more effective when Intelly Green is added.

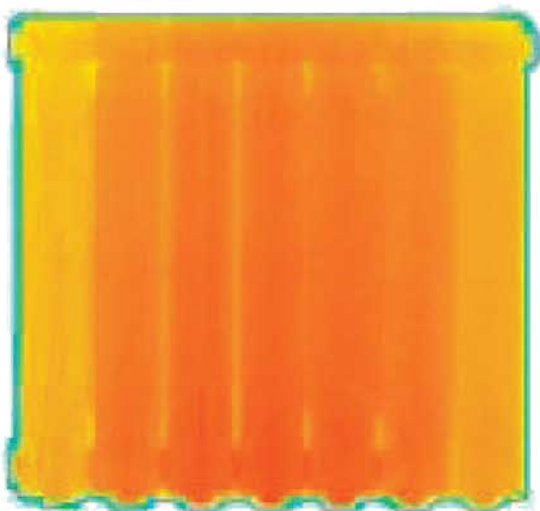

Hot Point Effect 100% Heat!

Thermal image of a common storage heater

Thermal image of a common Panel heater

Thermal image of an Intelli Heat radiator

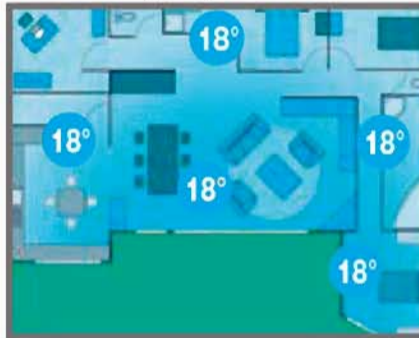

The 'thermodynamic' fluid, specially designed for IntelliHeat, favours optimum circulation and quickly diffuses heat on all the exchange surface of the radiator. Its components also contribute to the permanent "hot point"

Creating Heating Zones *“The Right Heat, Only Wherever and Whenever It’s Needed”*

Saturday/Sunday

The Benefits

- Energy Efficient Technology
- Affordable alternative to storage, oil, lpg or solid fuel
- Can be plugged directly into a 13 amp socket
- 2 year Guarantee
- Heat available on demand
- Low Surface Temperature (LST) technology
- No expensive service or yearly maintenance
- Quick and easy install

**2 YEAR
GUARANTEE**

Our Factory

- High level of automation.
- Advanced research and development policy.
- Integrated mechanical electronic engineering and design departments.
- Unrivalled support & training for our authorised installers.
- High level of quality and reliability with systematic controls at each stage of production.
- Unique integrated manufacturing process: from base materials through to the finished product.

Our high performance standards, advanced machinery and quality manufacturing is in demand throughout Europe.
