

We have installed at numerous sites across the UK with great feedback

**HAFELE KNX TRAINING CENTRE 66 NEEDO R line
Rugby - Centrally based in England, Hafele Home of Technologies
fully certified training centre offers KNX training to anyone
interested in home automation.**

Needo Electric Heating

The control of the device is by the open standard Zigbee pro used in home automation. Giving the user control and multi room programming, allowing feedback on energy consumption. Using an open standard allows for future integration to other devices. Taking full control of when the unit is on is a crucial part of controlling energy usage for smart energy supply.

The unit is supplied as standard with **Zigbee** wireless communication, but is also the only electric heater certified with **KNX**, something we need to promote to this specialist market place.

NF performance standards will reduce the average CA Coefficient to Aptitude to 0.6. Needo is already performing at .18 average. This demonstrated how efficient the unit is, the more efficient the more energy is turned into usable heat, so the lower the running cost.
