

Sole UK agent for Needo radiators

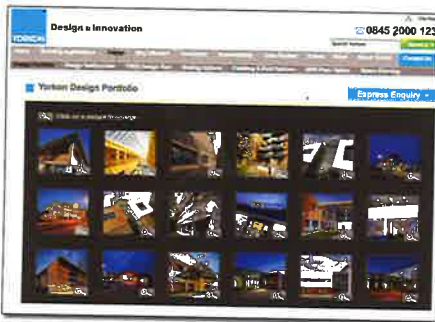

Advanced electric heating company Intelliheat has become the sole UK agent for Needo radiators.

The Needo brand is manufactured in 2009 by Zoppas Industries, a leader in the production of heating elements for domestic and industrial applications. More than just radiators, Needo offers heating solutions that blend perfectly with your interior design. A priority on aesthetics that combine practicality with everyday use.

Not only are its radiators more efficient than traditional electrical heaters, they are also ultra thin (3cm thickness is available), super stylish and highly user-friendly. In addition, they can be controlled and programmed independently and via remote control. The range of five designs includes a towel rail.

Web resource for architects and contractors

Award-winning off-site specialist and Portakabin subsidiary, Yorkon, has launched a new web resource for architects and contractors to encourage greater design flexibility and architectural variety in modular construction. The new Design section on the website - www.yorkon.info - features:

- A comprehensive project portfolio to show examples of Yorkon modular buildings; demonstrating the design possibilities of the Yorkon steel-framed off-site building system;
- A testimonials section with comments from architects and building users about modular building design and use;
- Sections on roofing, cladding and glazing;
- And a downloadable interactive design tool to help architects and contractors work with off-site construction, and produce faster and more accurate project drawings. (01904 610990)

Frontier Pitts three distinct product ranges

Frontier Pitts has introduced three distinct product ranges: the PC Range (Parking Control); the HD Range (Heavy Duty), and the PAS 68 Impact Tested AT Anti-Terra range.

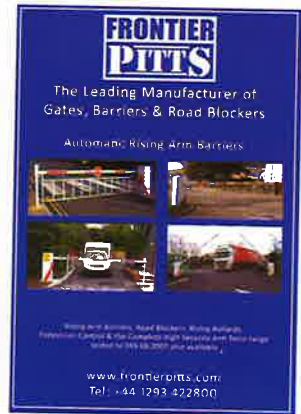

The PC Range includes parking control equipment such as automatic rising arm barriers, parking height rising kerb, manual barriers, road closers and telescopic bollards. The HD range includes equipment manufactured to a heavy industrial specification such as

respected LoTracker and LiteTracker Security Sliding Gates. The Anti-Terra range has been impact tested, stopping and immobilising a vehicle weighing

7500kg travelling at 50mph (80km/hour).

Frontier Pitts has developed the Anti-Terra range to meet the requirements of airports, embassies, palaces, government buildings etc. (01293 422800)

PE talks to Intelli Heat, about the potential of electric heating.

Think heating and most of us conjure up images of gas boilers and wet radiator systems. However, this mindset is now being challenged by companies like Intelli Heat. It is championing the use of electric radiators, and by doing so opening up a wider market for contractors.

Intelli Heat has recently launched a range of LST electric radiators into the UK market. Not only do they offer precise heat control but also the ability to reduce energy consumption by as much as 25%. And when used in conjunction with the company's new IntelliGreen energy consumption monitoring system, even greater savings are promised.

No plumbing needed

Electric radiators require no plumbing or pipes,

and zero to minimal maintenance. This makes them suitable for domestic renovation projects, commercial installations and new build schemes. The company believes its products shift electric radiators away from the typical view that electric should only be considered when gas or oil is not a viable option.

Managing director Salvatore Cirusuolo explains: "As individual systems, Intelli Heat offers a great opportunity to have virtually on-demand, highly responsive, heating."

Independent control

The company's radiators work independently of one another and can be programmed to deliver the exact heat requirements of different times of the day, further increasing efficiency. There is a choice of four programmable thermostats - from the basic seven day lockable stat with seven day timer to a handheld WIPPY wireless programmer that can control up to 50 radiators, measure power usage for each and can enable internet activation.

Electric radiators are a highly controllable form of heating
